

VN-Index's trend

➤ Weekly chart

Current price: 775 points
 Support level: 750-756 points
 Resistant level: 780-786 points

VN-Index showed that middle and long-term recovering trend is still there since the index still closed above most important MA lines from MA5 to M26. At the same time, ADX increased to above 36 and +DI was above –DI, confirming current recovering trend.

Moreover, other technical indicators are also showing signs supporting the trend, as:

- MACD is increasing positively and staying above Signal line.
- RSI is above 79, showing that recovering motivation is quite strong.

Therefore, we keep our point of view that middle and long-term gaining trend of VN-Index is still there.

VN-Index's trend

➤ Daily chart

VN-Index's main trend in short term might still be there since the index closed above most important MA lines from MA20 to MA200. At the same time, ADX was above 27 with +DI being above -DI, confirming current trend.

However, the index dropped to below MA5 while on candle chart there was Nearish Engulfing candle, along with delayed indicators like MACD and RSI dropping, showing that selling signs are forming. Therefore, the index might see correcting pressure next week and current support level might be 756 points (Fib 61.8).

In general, the main trend in short-term might still be recovering. However, the index might need more technical correction to support the main trend. Therefore, investors should keep a reasonable weight to create best position.

HNX-Index's trend

➤ Weekly chart

Current price: 101.5 points
 Support level: 98.8 points
 Resistant level: 101.9 points

HNX-Index's recovering trend in middle and long-term is still there since it closed above most important MA lines from MA5 to MA26 and ADX increased to above 35 while +DI being above -DI, supporting recovering trend.

Not just that, other technical indicators are showing positive signs, like:

- MACD increased and stayed above Signal line.
- RSI increased to 86, showing strong recovering motivation.

Therefore, we think that the recovering trend in middle and long-term of HNX-Index is still there.

HNX-Index's trend

➤ Daily chart

HNX-Index saw similar situation with VN-Index as it closed above most important MA lines from MA5 to MA200, showing that short-term recovering trend might still be there.

However, the signs warning on current trend reversal have appeared as there was Bearish Engulfing candle on candle chart, and the volume increased strongly in the last 2 sessions of the week, showing increasing selling pressure. Therefore, the index might see correcting pressure next week and support level for this correction might be 98.8 points (Fib 78.6).

Therefore, we think that short-term motivation is getting weaker and correcting pressure is getting stronger. So investors should keep a safe weight in the portfolio.
