

VN-Index's trend

➤ Weekly chart

Current price: 771 points
 Support level: 755-760 points
 Resistant level: 780-785 points

VN-Index recovered. The index stayed above MA13 and 26 with ADX being above 31 and +Di being above –DI, meaning that recovering trend in middle and long-term is still there.

The trading volume increased but still stayed below 10 and 20 week average, and delayed indicators like MACD are still dropping negatively, showing that the cash flow is being cautious. Besides, MA5 and 13 are tending to move sideways and meet, showing that the index might still move within a small range around these MA line to collect next week.

Therefore, we keep our point of view that the recovering trend in middle and long-term still exists.

VN-Index's trend

► Daily chart

VN-Index's short-term recovering trend might still be there since the index closed below MA20 and 50. Meanwhile, +DI was below -DI, and MACD dropped to below Signal line, showing that selling signs are still there.

However, recovering motivation got better since the index closed above MA5 and RSI tended to increase to 49 again. Therefore, investors might observe the index's movement closely at the resistant level of 776 points (MA20). In case the index can surpass this level, short-term recovering trend might return.

In general, short-term correcting pressure is easing down and the index is showing positive signs again. Therefore, investors should closely follow the market to come to suitable decisions.

HNX-Index's trend

➤ Weekly chart

Current price: 102.6 points
Support level: 101.8 points
Resistant level: 105.7 points

HNX-Index showed that middle and long-term recovering trend is still there, since the index saw a recovering week again. At the same time, the index closed above MA5, 13, and 26 and ADX was above 43 with +DI being above -DI, supporting current trend.

Not just that, other technical indicators also showed positive signs, as MACD stayed above Signal line and RSI increased again to 73, showing that recovering motivation is getting stronger again.

Therefore, we think that HNX-Index's middle and long-term recovering trend is still there. So investors might continue keeping a high share weight for long-term positions.

HNX-Index's trend

➤ Daily chart

HNX-Index is showing positive signs since it stayed above MA5 and 20, and the volume stayed above 10 session average, meaning that the cash flow is quite stable. Not just that, ADX tended to increase and +DI stayed above and tended to raise the gap with -DI, sowing signs confirming current trend.

Not just that, other technical indicators also supported the index's gaining trend, as MACD increased and cut Signal line, confirming buying signs, and RSI increased to 62, showing that the index's gaining motivation might still be there, and the index might move to challenge 105.9 points next week.

Therefore, we think tat short-term recovering trend might continue. So investors might consider opening new purchases at small weight on the codes with positive business results in Q3/2017.
