

VN-Index's trend

➤ **Weekly chart**

Current price:	843	points
Support level:	820-825	points
Resistant level:	870-875	points

VN-Index saw the 5th gaining week in a row. Middle and long-term recovering trend is maintained, as the index closed above most important MA lines from MA5, 13, and 26 and stayed above gaining trend line (forming from bottoms in January and December 2016 until now).

Not just that, other technical indicators like RSI, MACD, or ADX are still showing signs confirming current trend, since RSI increased to 80, MACD was above Signal line, confirming middle and long-term buying, and +DI maintained the distance above -DI, showing that the index might move up in near future.

Therefore, we think that middle and long-term gaining trend is quite positive. Therefore, investors might keep a high weight for long-term holding.

VN-Index's trend

► Daily chart

VN-Index saw a strong gain at the end of the week, it returned to MA5 and stayed above MA20, and ADX was above 34 with +DI being above -DI, showing that the index might still be in short-term recovering trend.

However, for other technical indicators, MACD and RSI are showing negative signs, as RSI tended to drop to 65 from over buying zone above 70, meaning that recovering motivation is dropping and MACD tended to meet with Signal line, showing that buying sign is weakening. Therefore, it is still possible that the index might need a technical correction to strengthen the recovering trend.

Therefore, the main trend might still be there, so investors can use technical corrections to restructure the portfolio.

HNX-Index's trend

➤ Weekly chart

Current price: 104.3 points
 Support level: 102 points
 Resistant level: 105.9 points

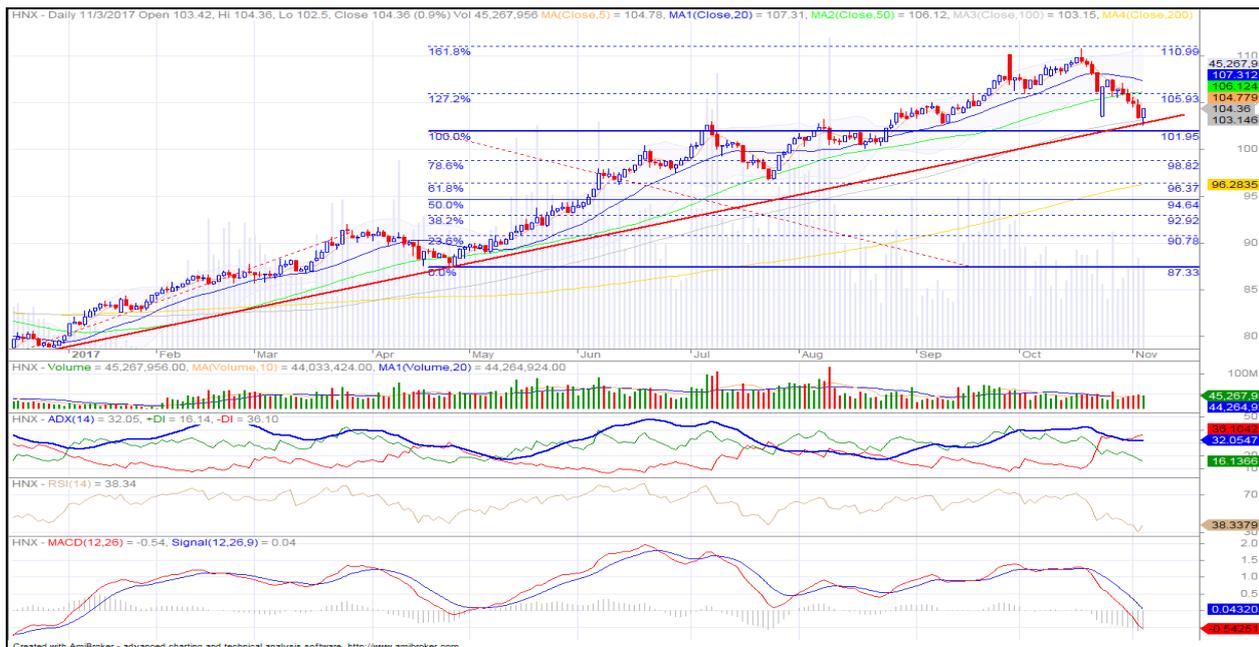

HNX-Index's long-term recovering trend is being maintained, as the index still closed above long-term gaining trend line (forming from bottoms in December 2016 and April 2017). At the same time, MA13 and 26 are tending to gain positively. Not just that, ADX is increasing to 47, and +DI stays above -DI, confirming current gaining trend.

However, the index dropped to below MA5 and 13, while RSI tended to drop to below 60, showing that short-term correcting pressure is getting stronger. Therefore, the index might be in short-term correcting trend to strengthen the long-term trend.

Therefore, we think that HNX-Index recovering trend in middle and long-term might still be there, but it might need a short-term correction to strengthen the trend. So, middle and long-term investors can use short-term correction to restructure the portfolio.

HNX-Index's trend

➤ Daily chart

HNX-Index might be in short-term correcting trend as it dropped to below MA5 and 20. Meanwhile, ADX is dropping and -DI cut up to +DI, confirming current short-term correcting trend.

Not just that, for other technical indicators, MACD is dropping negatively, showing stronger selling signs, and RSI dropped to 38, showing stronger correcting pressure. So the index might drop to challenge support level of 101.9 points (Fib 100).

Therefore, we think that HNX-Index's short-term correcting trend is still there. So, we think that investors should keep the portfolio on HNX at a safe rate.
