

### VN-Index's trend

➤ **Weekly chart**

Current price:	868	points
Support level:	820-825	points
Resistant level:	870-875	points

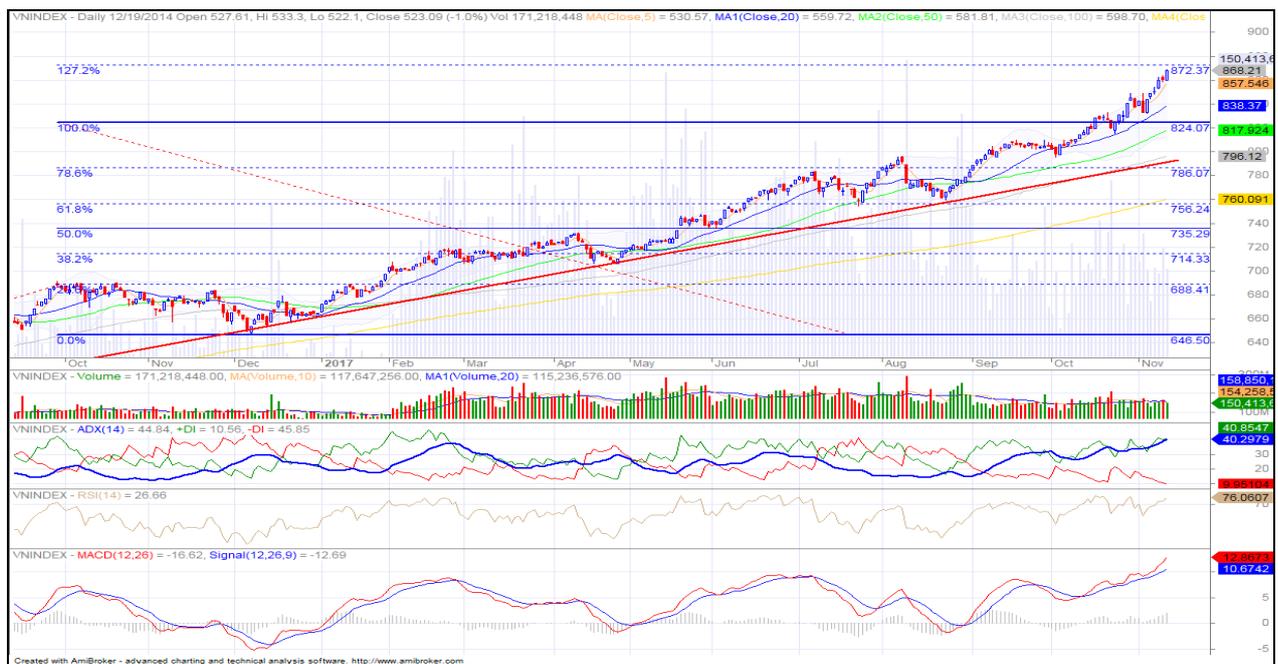

VN-Index saw the 6<sup>th</sup> gaining week in a row. Middle and long-term recovering trend is still there, as the index closed above most important MA lines like MA5, 13, and 26 and stayed above gaining trend line (forming from bottoms in January and December 2016 until now).

Not just that, other technical indicators like RSI, MACD, or ADX showed signs supporting current trend, as RSI increased to 84, MACD was above Signal line, confirming middle and long-term buying signs, and +DI maintained the distance above -DI, showing that the index might move up in near future.

So, we think that middle and long-term gaining trend is quite positive. Therefore, investors might keep a high weight in the portfolio for long-term holdings.

## VN-Index's trend

### ▶ Daily chart

VN-Index saw a strong gain at the end of the week and stayed above MA5 and 20, ADX was above 40 with +DI being above -DI, showing that the gaining trend is quite strong.

Moreover, other technical indicators also showed consistent signs on the positive uptrend, but MACD was above Signal line and RSI increased to 76, showing that recovering motivation is quite strong, and the index might gain to challenge resistant level of 872 points (Fib 127.2).

So, the main trend is still there. Therefore, investors might consider raising a small weight on leading codes with unique stories.

## HNX-Index's trend

### ➤ Weekly chart

Current price: 106.3 points  
 Support level: 105.9 points  
 Resistant level: 110.9 points

Similar to VN-Index, HNX-Index's gaining trend in long-term is also maintained, as the index still closed above long-term gaining trend line (forming from bottoms in December 2016 and April 2017).

Not just that, the index stayed above important MA lines like MA5, 13, and 26, and for trend indicators, ADX was above 45 and +DI was above -DI, confirming gaining trend.

Therefore, we think that HNX-Index's middle and long-term recovering trend is still there. So, middle and long-term investors might maintain a high weight for long-term positions.

## HNX-Index's trend

### ➤ Daily chart

HNX-Index was positive again in short-term, as the index moved to close above MA50 again. And RSI increased to 51, showing signs on stronger recovering trend.

However, short-term correcting pressure is still there, as the index still closed below MA20, and MACD was still below Signal line, meaning that buying sign hasn't been confirmed. Therefore, resistant level of 106.5 points (MA20) might be an important one, in case the index surpasses this level, short-term recovering trend might return.

Therefore, we think that HNX-Index's trend in short-term is showing positive signs again. So, investors might raise a small weight when the index surpasses important resistant level of 106.2 points.
