

VN-Index's trend

➤ Weekly chart

Current price: 984 points
 Support level: 930-935 points
 Resistant level: 995-1,000 points

VN-Index is in middle and long-term gaining trend, as it stayed above MA5, 13, and 26. At the same time, the index also stayed above long-term gaining trend (forming from bottoms of January and December 2016 until now), and ADX is increasing to 50 with +DI being above -DI, meaning that the gaining trend is quite strong and clear.

Not just that, other technical indicators also supported current gaining trend, as MACD increased to above Signal line and RSI showed signs of increasing again to 84, showing positive gaining motivation.

Therefore, we think that the middle and long-term gain is still there. So, investors might maintain a high weight for middle and long-term positions.

VN-Index's trend

► Daily chart

VN-Index's short-term recovering trend is still there as it stayed above most important MA lines from MA5 to MA200. At the same time, ADX is above 35 with +DI being above and tending to raise the gap with -DI, confirming current gaining trend.

Not just that, other technical indicators like MACD and RSI are increasing positively. Moreover, the volume is increasing again to above 10 and 20 session average, meaning that the cash flow is positive and the index might move to challenge sentimental level of 1,000 points.

In general, VN-Index's short-term recovering trend might still be there, so investors might consider raising the weight on leading codes with positive 2018 business prospect.

HNX-Index's trend

➤ Weekly chart

Current price: 116.8 points
 Support level: 114.8 points
 Resistant level: 119.8 points

HNX-Index's main trend in middle and long-term might still be recovering as the index stayed above most MA5, 13, and 26, and ADX increased to 41 with +DI being above -DI, showing positive recovering trend.

Not just that, other technical indicators still confirmed the trend, like:

- MACD is above Signal line, meaning buying signs are maintained.
- RSI increased to 72, showing positive gaining motivation.

Therefore, we think that HNX-Index's middle and long-term recovering trend is still there. So middle and long-term investors might hold on to a high weight in their portfolio.

➤ Daily chart

HNX-Index's short-term gaining trend is getting stronger, as the index surpassed the old peak of 116.7 points and stayed above MA20 with +DI moving upward and tending to raise the gap with -DI which was positive.

Not just that, other technical indicators are also showing signs supporting current gaining trend, as MACD cut up to Signal line, confirming buying signs, and RSI increased to 68, showing that recovering trend is getting stronger, and the index might move to challenge resistant level of 119.8 points (Fib 161.8)

Therefore, we think that HNX-Index's short-term correcting trend might still be there. So, investors might consider raising weight on leading codes with positive 2018 business prospect.
