

### VN-Index's trend

➤ **Weekly chart**

Current price: 1,150 points  
 Support level: 1,100-1,110 points  
 Resistant level: 1,170-1,180 points

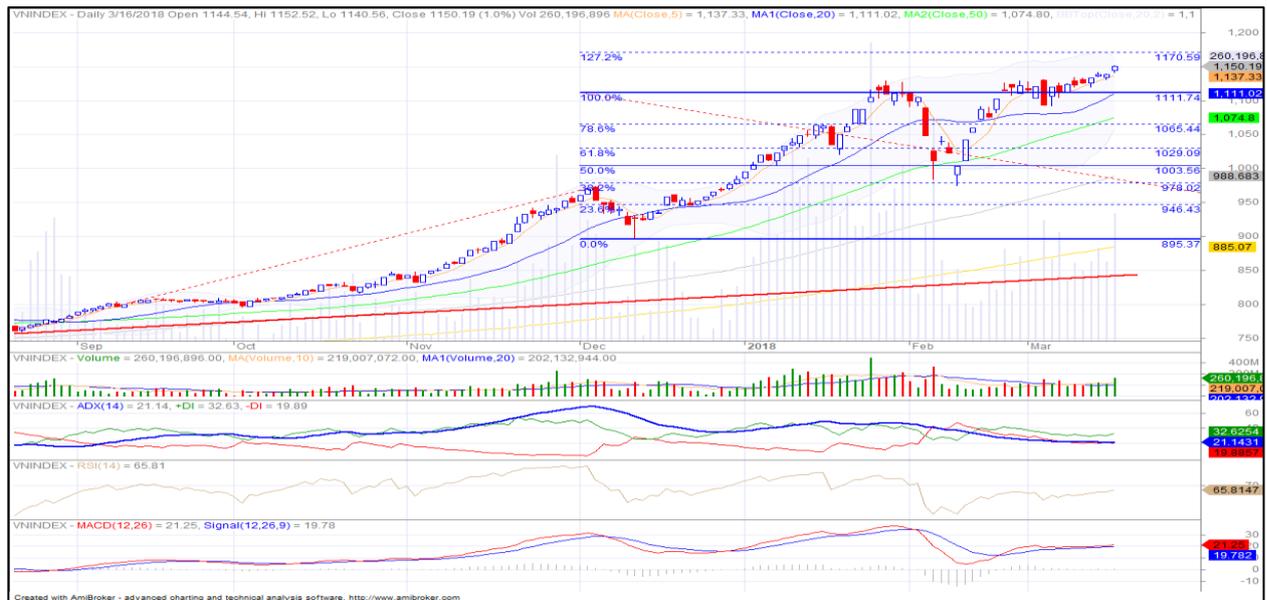

VN-Index saw the 4<sup>th</sup> gaining week in a row. Middle and long-term gaining trend is still there, as the index stayed above most important MA lines like MA5, 13, and 26 and stayed above gaining trend (forming from bottoms of 2016 and 2017 until now).

Not just that, other technical indicators like RSI, MACD, or ADX still showed signs confirming current trend. RSI increased to 74, MACD was above Signal line, confirming middle and long-term buying and +DI is still maintaining the gap above -DI, showing that the index might still gain in near future.

Therefore, we think that the middle and long-term gaining trend is still there. So, investors might maintain a high weight for middle and long-term positions.

## VN-Index's trend

### > Daily chart

VN-Index is showing positive gaining motivation, as it saw a gain at the end of the week and stayed above old peak of 1,130 points. Moreover, the index still stayed above MA5 while MA20 and 50 are pointing upward, showing that short-term gaining trend is still maintained.

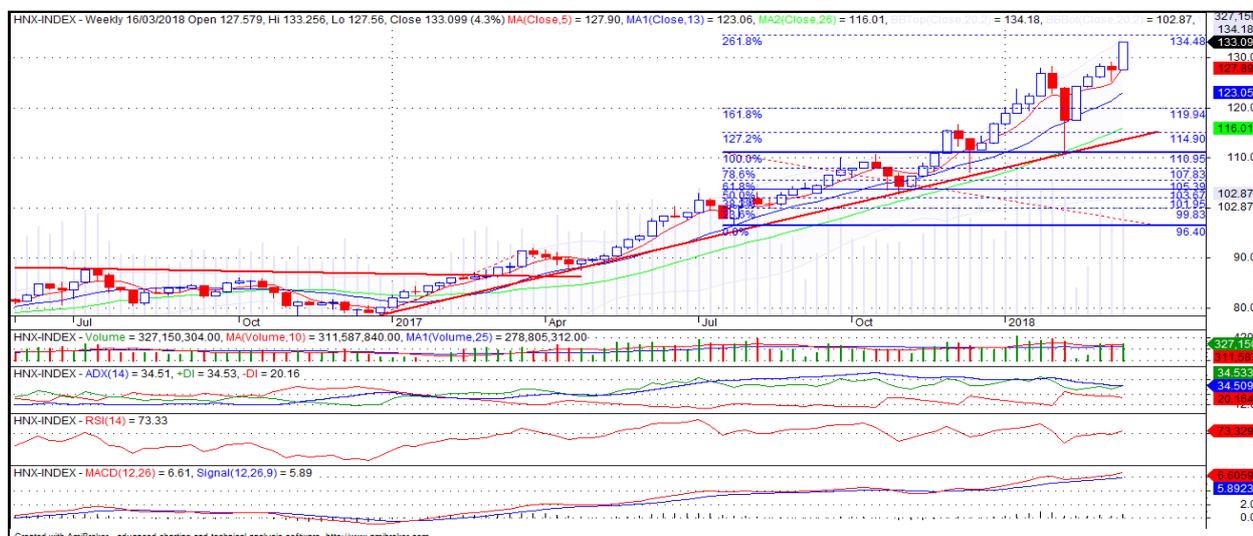

Not just that, other technical indicators also supported the trend as MACD and ADX increased. Especially, ADX increased again to 21 with +DI being above -DI, showing that the gaining trend is still confirmed, so the index might move to challenge historical level of 1,170 points.

Therefore, we think that the gaining trend is maintained, so investors might raise a small weight on leading codes.

## HNX-Index's trend

### ➤ Weekly chart

Current price: 133 points  
Support level: 128.2 points  
Resistant level: 134.4 points

HNX-Index's middle and long-term recovering trend is still there, as the index stayed above long-term gaining trend line (forming from bottom in December 2016 and bottoms in 2017). At the same time, MA13 and MA26 are tending to move up positively.

Not just that, other technical indicators are showing signs supporting current gaining trend, like:

- ADX is increasing to 34 with +DI being above -DI, confirming current gaining trend.
- MACD is above Signal line, meaning that middle-term buying signs are maintained.
- RSI increased to 73, showing that gaining motivations are good.

Therefore, we think that HNX-Index's middle and long-term recovering trend is still there.

## HNX-Index's trend

### ➤ Daily chart

HNX-Index showed similar signs with VN-Index. HNX-Index's short-term recovering trend is still there, as the index stayed above MA5 and 20, and ADX is still above 24 with +DI being above -DI, confirming current trend.

Not just that, other technical indicators like RSI and MACD are showing signs supporting short-term recovering trend, as MACD stays gaining positively, RSI is above 68, showing that recovering motivation is getting stronger, and the index might move to challenge 134.5 points (Fib 261.8).

In general, short-term recovering trend is still there and the index might move to challenge higher resistant levels. Therefore, investors might raise a small weight on leading codes.
