

VN-Index's trend

➤ Weekly chart

Current price: 987 points
 Support level: 940 – 950 points
 Resistant level: 990 - 1,000 points

VN-Index's long-term trend is still gaining as it stayed above long-term gaining trend line (from the bottoms in January and February 2016 until now).

Besides, middle-term correcting is showing signs of ending, as:

- The index showed signs of cutting up to MA13 and MA5 cutting up to MA13, confirming the end of middle-term correcting trend.
- MACD still stayed below Signal line but tended to move upward, showing weaker selling signs in middle-term.
- RSI increased to 49 from over selling below 30, showing stronger recovering motivation.

So, we think that middle-term correcting trend is ending. Therefore, investors might consider opening middle-term purchase with pilot weight. At the same time, hold on to long-term positions on good fundamental codes with growing prospect in 2018.

VN-Index's trend

> Daily chart

VN-Index's short-term recovering trend is still there since the index closed above short-term MA lines from MA5 to MA50. At the same time, +DI stayed above -DI, confirming current gaining trend.

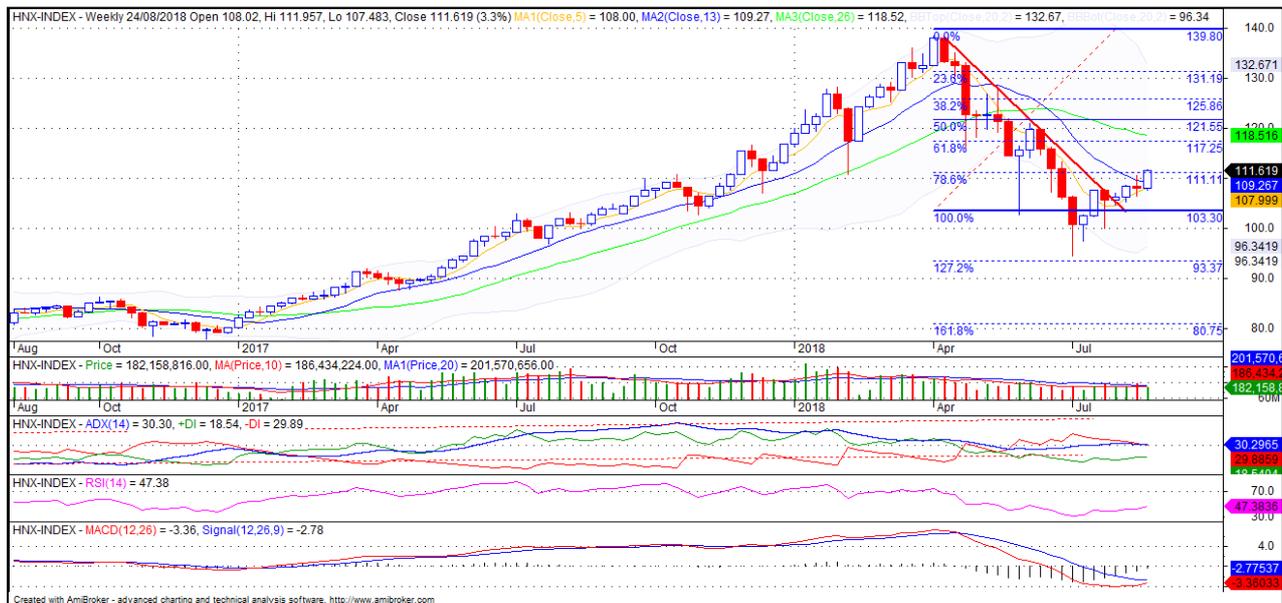

Not just that, other technical indicators are showing positive signs, as MACD was above Signal line, maintaining buying signs, and RSI increased to 64, showing stronger recovery. Therefore, the index might move on to challenge sentimental resistant level of 1,000 points next week

In general, recovering trend is still there. Investors might raise a small weight on good fundamental codes with resanable price and growing prospect in 2018.

HNX-Index's trend

➤ Weekly chart

Current price: 111.6 points
 Support level: 106.3 points
 Resistant level: 117.2 points

HNX-Index's correcting pressure is ending and middle-term recovering trend is returning since the index broke middle-term dropping trend (forming from peaks in April and June 2018) and the index is moving to above MA13, confirming the return of middle-term recovering trend.

Not just that, other technical indicators still showed positive signs, as MACD is tending to meet up with Signal line from below, and RSI increased to 47, showing increasing recovering motivation

In general, HNX-Index's middle-term trend might still be correcting. Therefore, investors should be cautious with long-term positions on HNX.
