

VN-Index's trend

➤ **Weekly chart**

Current price: 974 points
 Support level: 960 – 965 points
 Resistant level: 995 – 1,000 points

VN-Index might create long-term bottom around 900 points and return to middle and long-term recovering trend since it stayed above week MA26. At the same time, MACD stayed above Signal line, maintaining buying signs.

However, other indicators like RSI and ADX are showing weakening signs, showing that the index might see short-term correction to support the main long-term trend. Support level for this correction might be 960-965 points (peak of October 2018).

Therefore, we think that VN-Index is on a short-term correcting trend to support long-term recovering trend. So investors might consider using short-term corrections to restructure long-term positions on good fundamental codes with positive 2019 business prospect.

VN-Index's trend

► Daily chart

VN-Index has dropped to below MA20, and $-DI$ was above $+DI$ with larger gap, showing that short-term adjusting pressure.

As observed, the index has been closing below MA5 in 2 sessions with increase in volume, showing stronger selling pressure, so the index might drop to support level of 960-965 points (bottom of April 2019).

In general, the index is facing stronger correcting pressure, so we suggest investors keeping a reasonable share weight.

HNX-Index's trend

➤ Weekly chart

Current price: 106.8 points
 Support level: 104.6 points
 Resistant level: 111.1 points

HNX-Index might form long-term bottom and is returning to recovering trend, since the index stayed above week MA26 and MA13 cut up to MA26, showing positive signs.

However, other technical indicators showed that the index is seeing pressure within a short-term correction, as the index closed below week MA5 again and RSI dropped to 49, showing weakening recovering motivation. Therefore, the index might need a short-term correction to support the long-term recovering trend.

In general, the index is on short-term correction to support long-term bottom level. Therefore, investors might consider buying long-term positions during short-term corrections.

HNX-Index's trend

➤ Daily chart

HNX-Index is struggling and short-term trend is not clear, since the index showed signs of cutting with MA20, and MA5, 20, and 50 are tending to meet, showing that there is a sideways movement.

Not just that, other technical indicators are showing different signs, as MACD cut up to Signal line, showing short-term buying signs, meanwhile, RSI dropped to 47, showing weaker gaining motivation. Therefore, we think that the index might continue sideways struggling scenario around 105.8-107.6 points (MA100 and 50) next week.

In general, HNX-Index might be on a short-term sideways trend, therefore, investors should consider keeping a balance weight and observe the market closely.
